

Navigation and Routing

Hosted by Alex Thalhammer

Outline

- Motivation
- Configuration
- Routing parameters

Motivation

- SPAs → single page application
- Simulate pages → routes
- URL should direct to the routed component
 - Bookmarks
 - **Back button**

Routing in Angular

Routing in Angular

/flight-demo/**passenger**

Angular Router

Configuration

```
export const APP_ROUTES: Routes = [  
  {  
    path: 'home',  
    component: HomeComponent  
  },  
  {  
    path: 'flight-search',  
    component: FlightSearchComponent  
  }  
]
```

Configuration

```
export const APP_ROUTES: Routes = [  
  {  
    path: '',  
    redirectTo: 'home',  
    pathMatch: 'full'  
  },  
  {  
    path: 'home',  
    component: HomeComponent  
  },  
  {  
    path: 'flight-search',  
    component: FlightSearchComponent  
  }  
]
```

Configuration

```
export const APP_ROUTES: Routes = [  
  {  
    path: '',  
    redirectTo: 'home',  
    pathMatch: 'full'  
  },  
  {  
    path: 'home',  
    component: HomeComponent  
  },  
  [...]  
  {  
    path: '**',  
    redirectTo: 'home'  
  }  
]
```

←----- Last route!!!

Configuration

```
// app.module.ts
@NgModule({
  imports: [
    BrowserModule,
    HttpClientModule,
    FormsModule,
    RouterModule.forRoot(APP_ROUTES)
  ],
  [...]
})
export class AppModule {}
```

for feature module: forChild

for root module

View von AppComponent

```
<a [routerLink]=" '/' ">Home</a>  
<a [routerLink]=" '/flight-search' ">Search flight</a>  
  
<div>  
  <router-outlet></router-outlet>  
</div>
```

View von AppComponent

```
<a routerLink="/">Home</a>  
<a routerLink="/flight-search">Search flight</a>  
  
<div>  
  <router-outlet></router-outlet>  
</div>
```

Programmatic routing

```
export class AppComponent {  
  
    constructor(private router: Router) {  
    }  
  
    navigateToFlightSearch() {  
        this.router.navigate(['/flight-search']);  
    }  
  
}
```

Routing with parameters

Parameters

- `passenger/7`
- `passenger/7;details=true;page=7`
- `passenger/7;details=true;page=7/flights`

Configuration

```
const APP_ROUTES: Routes = [  
  [...]  
  {  
    path: 'flight-search',  
    component: FlightSearchComponent  
  },  
  {  
    path: 'flight-edit/:id',  
    component: FlightEditComponent  
  }  
]
```

Parse parameters

```
export class FlightEditComponent {  
  
    public id: string;  
  
    constructor(  
        private route: ActivatedRoute) {  
  
        route.params.subscribe(  
            p => {  
                this.id = p['id'];  
                [...]  
            }  
        );  
    }  
    [...]  
}
```

Links of routes with parameters

```
<a [routerLink]="['/flight-edit', flight.id]'>Edit</a>
```

Links of routes with parameters

```
<a [routerLink]="['/flight-edit', flug.id, {showDetails:true}]">Edit</a>
```

DEMO

LAB

Lazy Loading

Why Lazy Loading?

- Load modules when they are needed
- Improve initial load (performance → very important!)

Root module with Lazy Loading

```
const APP_ROUTE_CONFIG: Routes = [  
  {  
    path: '',  
    redirectTo: 'home',  
    pathMatch: 'full'  
  },  
  {  
    path: 'home',  
    component: HomeComponent  
  },  
  {  
    path: 'flights',  
    loadChildren: () =>  
      import(['...']flight-booking.module')  
        .then(m => m.FlightBookingModule)  
  }  
];
```

Routes for feature module

```
const FLUG_ROUTES = [  
  {  
    path: 'subroute',  
    component: FlightBookingComponent,  
    [...]  
  },  
  [...]  
]
```

```
export const FlugRouterModule =  
  RouterModule.forChild(FLUG_ROUTES);
```

DEMO

Preloading

Idea

- Once the initial load (the important one) is complete load the lazy loaded modules (before they are even used)
- Once the module will come into use it's immediately accessible

Use preloading (very easy!)

```
export const AppRoutesModule =  
  RouterModule.forRoot(  
    ROUTE_CONFIG,  
    { preloadingStrategy: PreloadAllModules }));
```
